

# FrontBase Manager

## Take control of your FrontBase databases with FrontBase Manager, an OS X utility that let's you remotely control all FrontBase database servers

- Multi-threaded and multi-processor application
- Instant Data Drag and Drop
- Remote management for FrontBase Databases
- Start and Stop Databases
- Full Mac OS X Aqua app
- Configure I.P. access filtering
- Monitor database status, access, and usage

Now you are just a click away from starting, stopping, configuring I.P. Access, and generally managing every aspect of your database. FrontBase Manager gives you a clean graphical interface combined with drag and drop controls so you can set critical elements of your database, all without the need for SQL programming.

With full multi-processor and multi-threaded support, FrontBase Manager won't slow you down, no matter how many databases you work with or operations you start. FrontBase Manager is a 100% Aqua application that takes advantage of OS X's multi-threaded kernel and rock-solid functionality for blindingly fast performance.

Need to create a report using data from your FrontBase database? No problem! Now with FrontBase Manager you can instantly drag and drop key data into Microsoft Excel, Microsoft Word, Mail or any other application that accepts text drag and drop.

**FrontBase Manager is *the* tool for serious FrontBase database developers.**

## Key Features:

**Multi-threaded and multi-processor application** – Multiple connections to the same database without creating data deadlock

**Instant Data Drag and Drop** – Drag and drop data rows to tab-delimited text into Microsoft Excel, Microsoft Word, or any application that accepts text drags.

**Remote management for FrontBase Databases** – Access any FrontBase database servers via the Internet or a corporate Intranet.

**Start and Stop Databases** – Minimize downtime by quickly resetting databases for clients remotely.

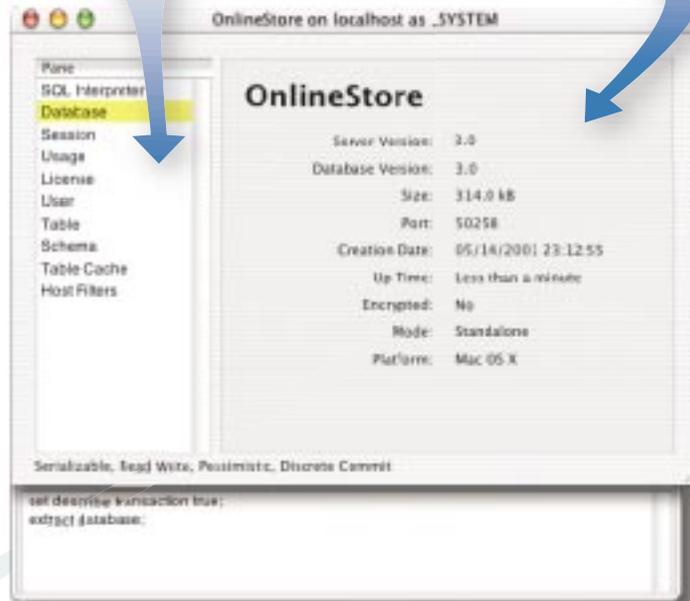

**Full OS X Aqua application** – Multi-threaded, robust, and easy on the eyes.

**Configure I.P. access filtering** – Set who has access to information, and where they can access it.

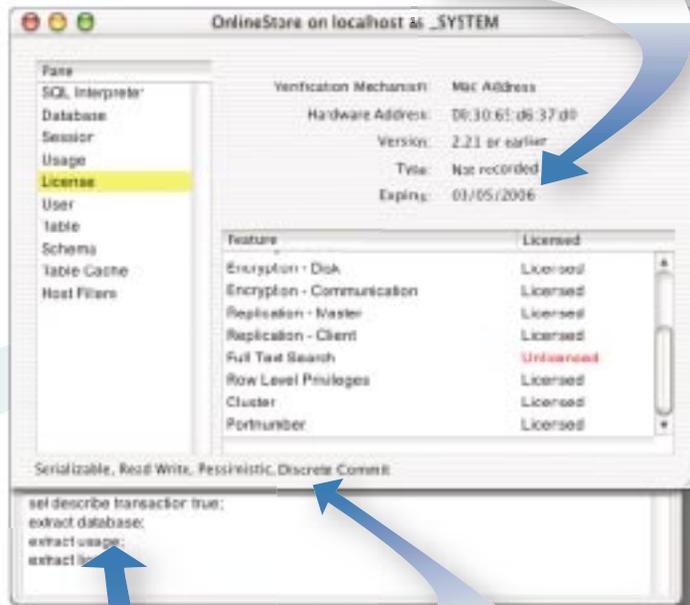

**Monitor database status, access, and usage** – Find out what you database does when you go home, with the ability to set up custom reports to track access and usage.
